Jordan Peters, Imaging Services Supervisor, is the most recent recipient of TriState Health's "Be the SPARC" Award. This award is a quarterly recognition that was established to honor employees who are creating a positive environment for staff and patients. This award recognizes those who provide compassionate service and establish connections with their peers and patients, while being committed to the highest standard of work ethic.

"Jordan always steps up in the time of crisis, or need. This past weekend the power flickered on and off. It shut down the CT machine and set off the MRI alarm. Jordan was not on call but came in to help his staff when they called him for advice. He was on his way out of the building and the MRI alarm intensified. Jordan stayed with his team when they were evacuated outside and assisted the Fire Department with investigating the issue in MRI. He went above and beyond for his team." – SPARC Award Nomination

The fully digital Imaging Center at TriState Health offers a wide range of diagnostic imaging services, and recently installed two new CT machines and a new MRI machine. The Aquilion One Genesis 320 Slice CT Scanner offers a full 360 rotation, which allows visualization of an entire organ in one volume scan. Utilizing this advanced technology allows the registered CT staff to provide improved low dose lung cancer screenings, cardiac CT scanning, improved image quality, quicker scan times, and enhances the overall patient experience. It also has a 78 cm (about 30 in.) patient opening and a 690 lb patient weight capacity. Additionally, the new Aquilion PRIME 80 Slice CT Scanner has a patient weight capacity of 660 lbs. This scanner has a fluoroscopy option that provides our radiologists with a real-time live view to better target lesions for biopsy, resulting in a better patient experience.

The new Vantage Fortian 1.5T MRI Machine has a 71 cm (about 27 in.) patient opening, offers quiet and efficient scanning technology, and has a patient weight capacity of 550 lb. It allows the registered and certified MRI staff to perform neuro, breast, musculoskeletal, vascular, cardiac, prostate, and body imaging with astonishing detail and accuracy.
